Installation Notes

Electrical

230V, 50Hz, 15 or 20° power supply required. It is recommended to set up a three-prong receptacle recessed into the wall and properly earthed, equipped with an individual circuit.

Water connection

A connection to the water mains with a pressure between 1.37 and 8.27 bar (20 and 120 psi) is required. It is recommended to provide a specific cock for closing the circuit, not to be installed directly behind the product for easier accessibility and a pipe (Max Ø 9.5 mm) with a suitable length to reach the front of the refrigerator of approximately 355 mm, with respect to the front of the kitchen doors.

A maximum space of 40 mm from the bottom of the recess is available for the water connection.

Visible area

The indicated area (102 mm) is visible once the refrigerator doors are opened, this area should be finished on both sides.

In case of non-flush installation, we recommend using the SKSFK800CS accessory, which consists of side panels that cover any visible side parts of the appliance.

Flush or extended installation

Custom panels

Panel options

SKSPK360FS: Kit with stainless steel panel

The appliance can be panelled with the optional Signature Kitchen Suite stainless steel door kit. The kit includes two fresh refrigerator compartment door panels, one convertible drawer panel (B), one freezer drawer panel (C), one toe kick and four handles.

Custom Panels

The appliance is designed to be customised with panels in line with the aesthetics of kitchen cabinets. For the dimensions of custom panels, refer to the diagram and the indications below:

A - Refrigerator door panels: 1254 mm x 452 mm) Maximum panel weight permitted: 15 kg

B - Convertible drawer panel: 233 mm x 908 mm) Maximum panel weight permitted: 10 kg

 \boldsymbol{C} - Freezer drawer panel: 533 mm x 908 mm) Maximum panel weight permitted: 15 kg

Toe kick: 102 mm x 908 mm

A gap between the various panels equal to 4 mm is present.

Design Tips

The Signature Kitchen Suite handles, in brushed aluminium, in the medium or long version, can be purchased separately as an accessory.

SKSHK310HS: Medium handles for custom panels

805 mm (31 11/16") Medium handle – Brushed aluminium

SKSHK480HS: Long handles for custom panels

1219 mm (48") Long handle – Shiny brushed aluminium

Installation Notes

Door clearances with flush installation

The installation must allow for clearances to adjacent walls or cabinets. The factory-set door opening is 115° and can subsequently be adjusted to 90° provided the clearances for opening at 115° are not sufficient.

ATTENTION

The clearance dimensions highlighted in the diagrams DO NOT include the depth of the handles, which must be added to these dimensions in case of a custom extended handle.

When using the Signature Kitchen Suite kit with brushed aluminium handles, the side clearances change as shown:

90° door Side clearance from 25 mm to 95 mm 115° door Side clearance from 235 mm to 305 mm

90° DOOR OPENING

Useful spaces for placing the handle on adjacent cabinets

In case of installation with door opening at 90° for potential placement of a extended handle on the side next to the refrigerator, a handle with a maximum height of 35 mm with respect to the external edge of the panel can be applied for the first 25 mm.

In case of installation with door opening at 115° for potential placement of a extended handle on the side next to the refrigerator, a handle with a maximum height of 30 mm with respect to the external edge of the panel can be applied for the first 35 mm.

A handle can be applied with a 20 mm increment in length for every additional 10 mm increment in distance from the flush cabinet.
